COLLOIDS AND SURFACES A

Subject Index

Acid treatment, 75
Adhesion, 343
Adsorption, 65, 117, 135
Adsorption layers, 125
Adsorption model, 49
Adsorption properties, 315
Aggregation property, 99
Air–water interface, 315
Alkane ether sulphonates, 315
Alkyl ether sulphates, 315
Alkyl polyglycosides, 333
Aqueous solutions, 315
Asymmetric membranes, 265
Atomic force microscope, 343

Bayer process, 65
Bitumen, 9
Bivalent counterions, 201
Boiling, 361
Brewster angle microscopy, 323
Bridging, 343

Calcium hydroxyapatite, 107
Capillary waves, 287
Capillary wave spectroscopy, 323
Carbonate, 65
Catalytic properties, 17
Caustic, 65
Cellulose membrane, 99
Cellulose microcrystals, 75
Cholic acid, 27
Co-surfactants, 333
Coagulation kinetics, 155
Cod-like micelles, 201
Colloidal dispersion, 381
Colloidal TiO_2, 49
Combined flocculation and coalescence, 189
Contact angle, 243, 275
Contact angle, complexity, 219
Contact angle, dynamic, 219
Contact angle of liquid tin on silica, 183
Copper, 35
Core/shell, 281
Crystalline stack, 59
CTAB, 41
$CuO–ZnO/Al_2O_3$ system, 17

Deaggregation, 155
Deposition, 83
Dewetting and wetting kinetics, 257
Disaggregation, 189
Disjoining pressures, 135
Dispersion stability, 117
DLVO theory, 9
Doublet lifetime, 189
Drop volume method, 237
Dynamic surface tensions, 237

Effect of counterions, 303
Electrochemical microscratching, 175
Electrolyte solutions, 375
Emulsion, 9
Emulsion destabilization, 189
Emulsions, 125, 135
Encapsulation, 281
Et Gly, 41
Ethyl ester of fluorescein, 49
Eu complex, 91
Exclusion, 303

Flocculation, 65
Floc fragmentation, 189
Flotation, 275
Fluorescence, 1, 91
Foams, 135
FTIR, 107

β-Casein, 355
Gradients of thermodynamical variables, 375

Haematite, 65
Hairy groups, 83
Heat transfer, 361
Hydrodynamic effect, 237

Hydrodynamics, 375
Hydrolysis, 41

Interfacial adsorption of BSA, OVA and LYS, 295
Interfacial electron transfer, 49
Interfacial tension, 295
Inverted aggregates, 27
Ion-exchange, 107

Laminin, 1
LB-layer, 275
Li_2O doping, 17
Light scattering, 201
Line tension, 183, 257
Liposomes, 1
Liquid drop spreading, 243
Liquid films, 135
Liquid membranes, 135
Liquid metal embrittlement, 175

Macromolecular stabilizers, 125
Marangoni number, 287
Micellar growth, 201
Microemulsions, 333
Microgels, 281
Mixed layers, 355
Mixture diffusion, 99
Mobility number, 287
Modelling, 361
Monodisperse, 59
Monolayers, 91
Moving contact line, 243

Nanoparticles, 91
Non-equilibrium boundary layer, 375
Normal aggregates, 27

Oil/water interface, 323

Parallel transport theory, 99
Peptide, 1
Phase behavior of water/*tert*-butanol/ammoniu, 295
Phase separation, 355
Phospholipid, 1
Phospholipid monolayer, 355
Photopolymerization, 323
Plug conductivity, 165
Polydimethylsiloxane Droplets, 281
Poly(ethylene oxide) (PEO), 343
Polymer films, 323
Polyvinylpyrrolidone, 117
Porosity, 303
Porous plug, 165
ζ-Potential, 165
PPIE model, 41
Precipitation of proteins, 295

Quantum size effects, 35
Quaternary ammonium ions, 303

Reconformation, 83
Rehbinder effect, 175
Reverse osmosis, 265
Rod-like particles, 75

Selective layer, 265
Semiconductor compounds, 35
Silica, 303
Silica particles, 59, 281
Single-particle light scattering, 155
Singlet–doublet reversible coagulation, 189
Slippage, 287
Solid–liquid interfacial tension, 183
Solid surface tension, equation of state, 219
Solid surface tension, from contact angle, 219
Special resolution, 381
Stability, 9, 361
Stability of wetting films, 275
Stöber silica, 165
Streaming potential, 165
Structural effects, 315
Sulfonated dyes, 99
Surface charge, 75, 303
Surface conduction, 165
Surface forces, 343
Surface modification, 107
Surface properties, 17
Surface tension, 135

Thermodynamic property, 355
Thermodynamics, 135
Thickness of the structural barrier, 155
Thin film, 125
Thin liquid wetting films, 287
Thixotropy/anti-thixotropy, 75
Three-phase partitioning, 295
Titanium dioxide, 117
Transition concentrations, 27
Tricosa-2,4-diynoic acid, 275

Uniform pore size, 59

Video microscopy, 381
Viscous force, 243
Viscous liquids, 237

Wetting, 243, 361

XPS, 107

Zeta potential, 9
Zwitterionic, 83
